[Clinic Address / Branch Location]

SUBJECT: REQUEST TO CONDUCT ON-SITE SYSTEM TESTING AND USER ACCEPTANCE EVALUATION FOR THE VETLINK DECISION SUPPORT SYSTEM

Dear Dr. [Last Name] and Esteemed Clinic Staff,

Warm greetings!

We are final-year Bachelor of Science in Information Technology (BSIT) students currently undertaking our undergraduate capstone research study entitled: **"VetLink: An Offline-First Progressive Web Application (PWA)-Based Animal Decision Support System with AI-Assisted Dermatological Assessment Using MobileNetV3 and Grad-CAM for Selected Canine, Feline, Avian, and Rabbit Conditions at VetLink Animal Clinic."**

In line with the completion of our system development and initial verification phase, we respectfully request permission from your good office to conduct an on-site system demonstration, User Acceptance Testing (UAT), and software quality evaluation at VetLink Animal Clinic on **tomorrow, November 4, 2026**, or at any date and time most convenient to your schedule.

The proposed on-site evaluation aims to accomplish the following clinical activities:

- **System Walkthrough & Demonstration:** Present the fully functioning VetLink PWA interface, demonstrating real-time AI dermatological screening (MobileNetV3), explainable Grad-CAM heatmaps, offline-first record caching, and automated clinical care protocol retrieval across canine, feline, avian, and rabbit species.
- **Hands-on User Acceptance Testing (UAT):** Facilitate guided interaction where licensed veterinarians and veterinary staff simulate patient intake, lesion photo capture, diagnostic review, and consultation record creation.
- **ISO/IEC 25010 Software Quality Evaluation:** Administer standardized survey questionnaires to evaluate the system's Functional Suitability, Performance Efficiency, Usability, Reliability, Security, and Clinical Workflow Integration.

Please be assured that the evaluation will be conducted with strict adherence to clinical decorum and will not disrupt regular clinic consultations or patient treatment. Furthermore, in compliance with Republic Act No. 10173 (Data Privacy Act of 2012), all clinical and patient data handled during testing will remain strictly confidential and anonymized. VetLink is designed strictly as an assistive decision-support tool and does not replace professional veterinary diagnosis.

We sincerely thank you for your generous partnership as our research beneficiary. Your practical feedback and professional evaluation will be paramount in validating the clinical feasibility and technical excellence of this research.

Respectfully yours,

THE VETLINK RESEARCH TEAM
